

## Task 1

**Aim:** Create Login/Registration /Sign Up Page as per application

**Tools:** Android Studio, Ms Word

### **Description about Application:**

A signup page (also known as a registration page) enables users and organizations to independently register and gain access to your system. It is common to have multiple signup pages depending on the types of people and organizations you want to register.

Registration only happens the first time you access the system. It is a way to check your credentials. Every time after your initial registration, you will log on to the system using the username and password you created.

Our sign-in page has features like automatic Google sign-in, forgot password, skip and create new account option.

Due to registration or login, users will be able to authenticate themselves first before opening the notes app so that their information is safe from accidental viewing of other people.

### **Conclusion:**

Hence, we have created an authentication page for our application and added features we believe would be user friendly.
